Preparation of studies on tariffs applicable to the water and sewerage service

Description

Through the preparation of a rate study, specific knowledge of the technical-economic situation of the supply is obtained, both in terms of costs and in terms of revenues.

The result will be a proposal for rate structures under the premise of the self-sufficiency of the service.

Objectives

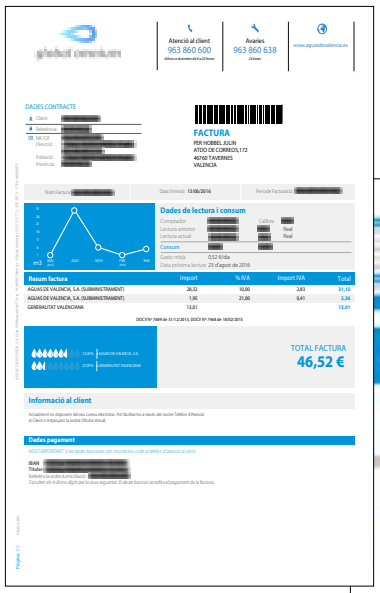
- Technical and economic analysis of municipal water and municipal sewage services.
- Proposal for rate structures that satisfy the specific supply characteristics under the premise of enhancing savings of water resources and the preservation of the water environment.

Results / Benefits

- Economic knowledge of service status.
- Economic optimization of rates to be applied in accordance with the efficiency and social criteria.
- Rationalization of water consumption by progressive rates.
- Comply with current legislation.

Target

Public administrations, public companies and municipalities with competencies over the service.

Actions


- Collection of documentary information.
- Technical-economic dossier for the approval of the municipal rate.
- Technical assistance for processing before the competent body.
- Generation of the municipal tariff.
