

Urban pest control in sewerage networks

DESCRIPTION

Sanitation networks present the necessary condition to promote the proliferation of rodents and insects, disease vectors, and to generate structural problems (leaks, blockages, etc.). It is necessary to proceed with pest control in order to minimize the population.

OBJECTIVES

- Elimination of insects and rodents in the municipal sewage network collectors.
- Prevent the spread of pests, rodents and insects in sewage collectors.
- Minimization of structural effects on the sewer network.

RESULTS / BENEFITS

- Healthsafeguards.
- Minimization of the deterioration of the sewerage network.
- Increased lifespan of the infrastructure.

ACTIONS

- Study of the optimal points in which to implement treatments, and the most and appropriate time of year for the same.
- Programming of treatments to be performed throughout the year.
- Preventive and corrective treatments.
- Reports on the results of the treatment.
- Citizen attention.

TARGET

Public administrations, public companies and municipalities with competencies over the service.
