

Carbon footprint

DESCRIPTION

Through the calculation of the carbon footprint of each product or service, the sources responsible for the emission of greenhouse gases can be identified, thus enabling us to define better objectives, more effective emission reduction policies and better targeted cost-saving initiatives.

The footprint calculator is a tool that enables the calculation of an operation's GHG emissions.

OBJECTIVES

Determination of the carbon footprint of drinking water and/or sanitation service.

Target

Public administrations, public companies and municipalities with competencies over the service.

ACTIONS

- Obtaining information about the service.
- Calculating the carbon footprint.
- Preparation of dossier.
- Identification and analysis of proposals for reduction of carbon footprint.

RESULTS / BENEFITS

- Reduction and/or offsetting of emissions of greenhouse gases.
- Prioritization of actions to reduce emissions.
- Modernization of facilities.
